HORIZONTAL BELT CONVEYOR

Transitions

Head section

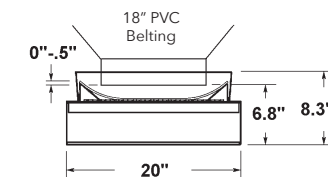

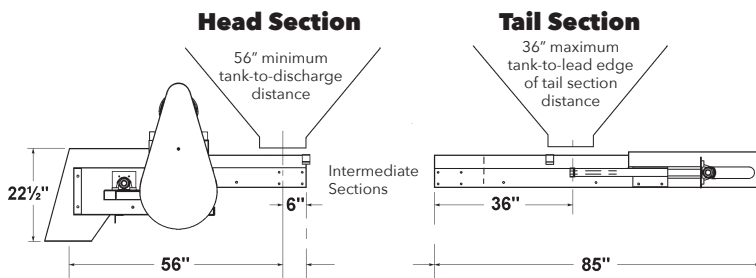

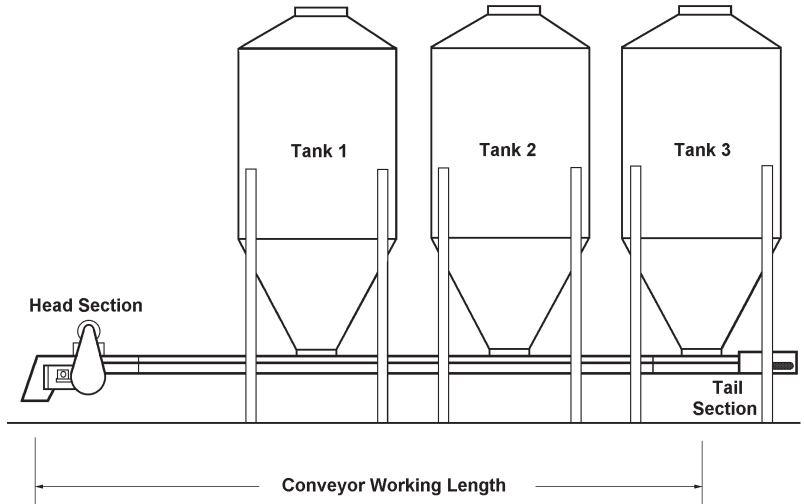

Tail section

Fast, convenient loading from hopper tanks. The perfect solution for return from hopper bottom bins. Horizontal Belt Conveyors are engineered for gentle handling of valuable seed and other bulk materials at speeds of up to 5000 cfh. They can be mounted on stands or suspended from hopper bins.

SPECIFICATIONS

Head section	8" head pulley is a lagged rubber type. The center of the first tank must be at least 56" from the conveyor outlet to clear the motor (based on a 12" tank outlet).
Tail section	4" tail pulley is steel. The last tank can be placed on the tail section up to 36" from the lead edge.
Belting	Friction surface belting rides on an expanded metal slider bed and has an "S" wrap drive.
Transitions	12" square transitions make quick tank-to-conveyor connections.
Return rollers	Return rollers with ball bearings are on 10' intervals.

For maximum efficiency, the bottom of the tank outlets should be level with the outer top edges of the belt or extend to 1/2" below the edges.
